PROFILE

Software Engineering and Economics & Data Analytics student with a strong academic background that combines technical, analytical, and innovative thinking. Passionate about engineering and the use of emerging technologies, with experience in web development and ecosystems such as blockchain, Web3, and Power BI. I stand out for my ability to quickly adapt to new tools and environments, along with a strong commitment to continuous learning. I aim to contribute creative, efficient, and high-impact technological solutions within teams that value innovation and continuous growth.

WORK EXPERIENCE

Manos Visibles

2025-2025

Backend Developer

- Implemented Strapi as a headless CMS and developed REST APIs using Node.js, ensuring a robust and scalable architecture. Performed containerization and deployment with Docker, configured PostgreSQL on DigitalOcean, and integrated external services such as Brevo and Google Analytics. Additionally, managed security, DNS, and performance using Cloudflare, and maintained best practices in version control with GitHub.

Plataforma para la Paz Mental

2025-2025

Full Stack Engineer (University Project)

- Designed and developed a mental health platform based on Cognitive Behavioral Therapy (CBT) resources, aimed at improving users' psychological well-being. Created an intuitive, user-centered interface and implemented a functional, scalable architecture that facilitates access to digital therapy resources.
